Art Unit: 2821

#### **DETAILED ACTION**

## Information Disclosure Statement

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the examiner on form PTO-892 has cited the references, they have not been considered.

# Claim Objections

2. Claim 4 is objected to because of the following informalities:

In claim 3, 2, replace miss-typed word "and inner" with –an inner- or correct it appropriately.

In claim 4, line 1, change the misspelled word "REID" with --RFID--. Appropriate correction is required.

In claim 9, line 6, change "the stores" with --that stores-- or correct it appropriately.

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-3, 5-14 and 16-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Grimes (US 6,359,444).

Art Unit: 2821

Re claims 1, Grimes discloses an RFID tag antenna system (i.e., sensing structure, 60, 70, 80, 90, 100) suitable for receiving an RF signal (Fig. 2), the RFID tag antenna system (i.e., sensing structure, 60, 70, 80, 90, 100) comprising:

a planar two arm spiral structure (i.e., 258, 268 illustrated in Figs. 6C, 6D)) arranged to receive the RF signal ((i.e., antenna 68, 78, 88, 98, 108 illustrated in Figs. 2A-2E), the two arms electrically isolated from each other but arranged defining a gap between the two arms (Figs. 6C, 6D), and

an electronic circuit including means for receiving and sensing the receipt of the RF signal (i.e., resonant circuit 64, 74, 84, 94, 104) electrically connected to the arms straddling the gap and arranged to receive the RF signal from the planar two arm spiral antenna (Figs. 2A-2E, Figs. 6C-6D; Col. 19, lines 25-55; Col. 20, line 56- Col. 21, line 50).

Re claim 2, Grimes further discloses the each arm of the planar two arm spiral structure (258, 268) is identical to the other except one is rotated the plane by 180 degrees from the other (Figs. 6C, 6D).

Re claims 3, 5 and 8, Grimes discloses a center being defined at the middle of the gap, and wherein each arm of the planar two spiral structure defines an inner radial spiral and an outer radial spiral (i.e., equiangular spiral antenna) arranged so that the width of each arm grows as the arms radiate further from the center (Figs. 5, 6D; Col. 21, lines 15-50; wherein at any point equidistant from the center the widths of each arm are equal to each other and equal to the spaces between each arm and wherein each arm of the planar two arm spiral structure comprises a thin conductive layer built onto a substrate (i.e., glass or ceramic).

Art Unit: 2821

Re claims 6 and 7, Grimes further discloses the antennae may be of a myriad shapes and sizes (i.e., the lateral dimension of the planar two spiral arm structure being less than about two inches by less than one inches) (Figs. 2A-2E; 6C, ^D; Col. 20, lines 40-67).

Re claims 9-11; Grimes further shows the electronic circuit (i.e., resonant circuit 64) comprises: a network that matches the spiral antenna electrical impedance and that receives the RF signal from the planar two arm spiral antenna and provides an RF output signal; and an input circuit that receives and rectifies the output RF signal forming a DC signal, the input circuit including a capacitor the stores energy from the DC signal (Figs. 2A-2E; Col. 13, line 17-Col. 14, line 48).

Re claims 12 –14 and 16-22, given Grimes's RFID tag antenna system (i.e., sensing structure, 60, 70, 80, 90, 100) suitable for receiving an RF signal, the method for receiving an RF signal from an RF signal generated as part of an RFID tag system as claimed in claims 12-14 and 16-22 is inevitable.

### Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 4 and 15, are rejected under 35 U.S.C. 103(a) as being unpatentable over Grimes (US 6,359,444) in view of an article in Applied Microwave and Wireless by Thaysen et al. submitted by Applicant.

Art Unit: 2821

Re claims 4 and 15, eventhough Grimes does not show the inner and outer radial spirals adhere to a logarithmic function, Grimes discloses spiral antenna and equiangular spiral antenna and further teaches in addition other known antenna deigns may be incorporated in the RFID tag antenna system (i.e., sensing structure, 60, 70, 80, 90, 100).

Thaysen discloses one known antenna structure wherein the inner and outer radial spirals adhere to a logarithmic function (i.e., a logarithmic spiral antenna) in Fig. 1, for the purpose of broadband application.

It would have been obvious to one having ordinary skill in the art at the time of the invention was made to substitute the equiangular planar spiral antenna of Grimes with a logarithmic spiral antenna as discloses by Thaysen for no other reason than transmitting or receiving RF signals at a desired frequency and further Grimes teaches that other known antennas may be used for the purpose of transmitting or receiving an RF signal.

#### Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Duan et al. (US 6,281,794); Wang (US 5,621,422); and Wang et al. (US 5,313,216); also teach similar inventive subject matter.

# Correspondence

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ephrem Alemu whose telephone number is (571) 272-1818. The examiner can normally be reached on M-F Flex hours.

Art Unit: 2821

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Don K Wong can be reached on (571) 272-1834. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
